write on this margin

Globalization is the phenomenon of flow of information, culture, beliefs, norms, economic principles across the border (around the world.)

Economy of the traditional societies and indigenous societies are also influenced by globalization

Ex Incursion of cash economy in tribals of Central India after colonisation.

Indigenous tribal economy

As per Sahlin's book "Stone Age Economics", Indigenous economy has :-

- primitive level of technology
- subsistence based economy
- tending towards immediate

consumption.

- economy embedded in socio-cultural matrix.
- follow reciprocity, redistribution, market exchange.
- division of labour form economic production.

Impact of globalisation due to following forces - Industrialization, modernization, urbanization, colonialism, better connectivity. ex - Sahlin called "the original affluent society") were forced to live life of poverty.

Impacts → Negative

① Decline of traditional market and economic exchange. ex reciprocity is on decline among Santhals.

(2) loss of kin-relation which were linked to economic exchange.

(3) Encroachment and exploitation

(4) MNCs tried to patent tribal products → loss of traditional knowledge
(Eg) Haldi patent by MNC.

(5) Conservation becoming bane for them
Ex → Wildlife protection Act following UN → directions → more hardship for hunter-gatherer.

Case Study - Mary Weismantel "The Children Cry for Bread" in Zumbagua, Ecuador.

Men went to city → bought bread

Women take care of children → Eat traditional rice

↓

After father leave → children cry for bread

Thus a complex family framework has emerged after globalisation.

Impact: Positive

1. Indigenous economy integrated to world market.

   (ex) Naandi tribe (study by Dalton)

   Cash economy — traditional economy

   Both in harmony

2. Tribal products - worldwide recognition

   (ex) Bastar Art

3. Helped in coming out of poverty and live life of dignity.

Thus, change has taken place in indigenous economy through adaptation. While planning Emic view should be taken (Substantivist economic principle)
