Following Franz Boas classification, biological anthropology is one of the 4 sub-fields of anthropology.

It is the ~~biologi~~ study of biological evolution and variation of human beings.

History and Background

1) Charles Darwin 'Descent of Man (1871)' popularized the subject.

2) Initially in 19th century, it was called 'physical anthropology', later with emergence of social biology & genetics its name was changed to biological anthropology.

Relevance

- 1) **Health & medicine** - analyzing occurrence, incidence & distribution of various disease. eg: TB, Cancer, COVID-19.
