first discovered near
the German city of Heidelberg in 1908
the fossil was a complete jaw.

features of
fossil discovered

① An almost square
ramus

② Tooth present
in jaw

③ Absence of Chin

Heidelberg Jaw

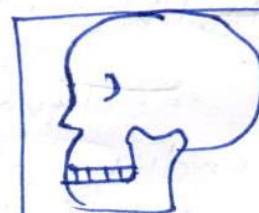

Time period

fossil is associated with the
time period of Homo erectus around
0.3 - 0.6 mya in Europe

Physical features

① Thick Cranium with a Cranial Capacity
of 800 - 1200 C.C.

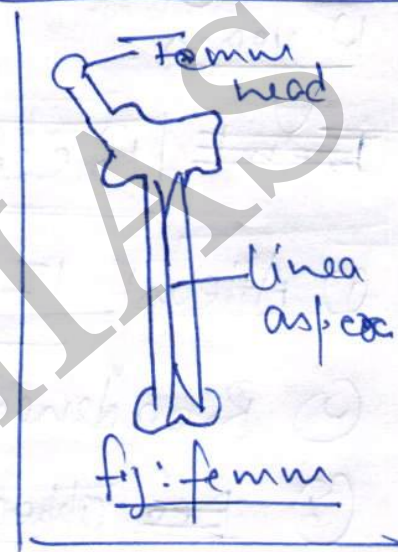

② Brow ridges present

Skull (Prognathism)

but less developed than Homo habilis

- ③ Anteriorly present foramen magnum
an evidence of erect posture along with Occipital condyles
- ④ Spinal Cord with four curves
- ⑤ femur with linea aspera
- ⑥ Developed heel & arched feet

Cultural Characters

- ① Evidence of hunting gathering, with bones like antelope, mammoth, etc.
- ② Most probably band type hunter gatherers
- ③ Acheulian tools like hand axe, cleaver, etc.

Thus Homo heidelberg shows important stage of homo development
