

L2A™

SECTION - B

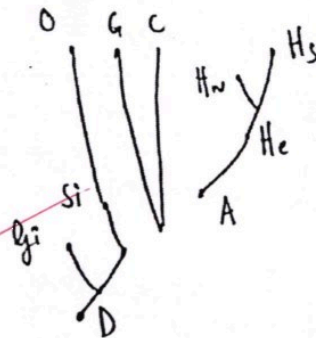

Q5. Write notes on the following in about 150 words each

(a) Give a chronological account of human evolution as evidenced by paleontological records 10x5=50
10

Paleontology refers to the study of human evolution and its development through the study of tools, skull bones and other things.

Chronological Account

O = orang
G = gorilla
C = chimp
Si = Sivapithecus
Gi = Gigantopithecus
D = Dryopithecus

A = australopithecus
He = Homo erectus
Hn = neanderthals
Hs = Homo sapiens

Fig: chronological evolution.

1) Dryopithecus has some features like parabolic dental arcade and Y-5 cusp pattern

2) Later Shanpitheus obtained from Siwalick Hills shown resemblance with Orangutans.

3) Australopithecus → presence of mastoid process, linea aspera, placement of foramen magnum.

4) Homo erectus: erect posture, decreased prognathism as found in Narmada Man in Hathnora. Gave rise to Homo Neanderthals and Homo Sapiens.

Homo Sapiens ~~not~~ ultimately evolved from Homo erectus by having increased cranial capacity, stereoscopic vision, erect posture as well as bipedalism around 200000 years ago.
