(b) Differentiate between the anatomical characteristics of man and larger apes 20

Humans and apes both belong to order primates.

There are several similarities between both:

- 1) Presence of Y-5 cusp ~~na~~ pattern (lower third molar)
XX
(Y-5 cusp)
- 2) Absence of externally visible tail.
- 3) Broad shoulders
- 4) Both live in groups
- 5) There is huge genetic similarity (98-1%)
between humans and apes.
- 6) Similar dental ~~axide~~ ~~(parabolia)~~
formula (2123)

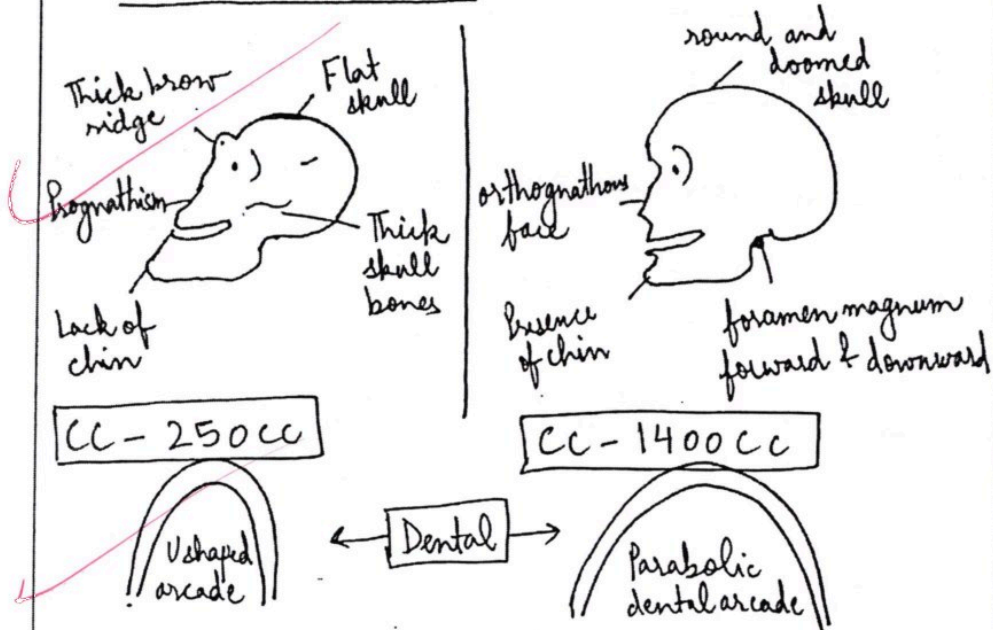

However both have many anatomical differences:

Differences

1) Skull and Teeth
