this margin

Archaeology is the study of prehistoric societies through the study of obtained artefacts and material culture like tools.

Survey Methods

1) use of satellite imagery and GIS mapping to properly map the archaeological site

eg: Prof Shantiappa used it recently to excavate Attiripakkam in Tamil Nadu

2) Use of techniques to study the natural environment.

For eg: there is more probability of finding artefacts near river side and source of water.

-excavation of Mahanadi valley done by

Mahapatra.

3) Stratigraphy to obtain the evolution of archaeological site

4) Use of river terraces to find the archaeological site.

eg: study of Soan valley by de Terra and Hattersen

1	}	Mesolithic
2		
3	}	upper paleolithic
4		
5	}	middle paleolithic
6		
7	}	lower paleolithic
8		

Fig: Bhimbetka.

5) Use of levelless and laser to proper survey the archaeological site
eg: currently being done in Rakhigarhi

With emergence of new technology, the survey methods in archaeology are fast changing.
