1.b) Eugenics, Euthenics and Euphenics

Eugenics was coined by the western scholar, Francis Galton. It means that better genes are promoted for the reproduction and bad genes are avoid.

Basis → As per Mendelian law of inheritance, the good character will pass on to the next generation.
(shows eurocentrism & Racism)

How? → by passing not to have inter-racial marriages
→ American breeder association.
→ Cloning of the genes ⊕ killings also.

Euthenics → is the process by which the vital genes are given the best environment to express themselves to the fullest of their ability.

(Eg) → Students in Navodaya school are enrolled who had ~~good~~ marks, more competitive edge, to better excel in their studies.

EUPHENICS

It is the process in which deleterious gene when diagnosed is cured either at genotypic level or phenotypic level.

Genotypic level

- Gene therapy
- CRISPR CAS 9
- addition, imprinting etc.

phenotypic level

- Use of enzymes hormones (eg) Insulin for Diabetes.

Criticism for Eugenics

→ Humans are 99.9% similar (HGP)
→ isolation is not too much to cause racism.
It is the Colonial hangover for divide & rule.

Thus, these basis shows the element of Colonial impact on the physical Anthropology.
