Q3. (a) Describe the Turner and Klinefelter Syndromes in humans

15

Chromosomal aberration is any missing, extra or irregular portion of chromosomal DNA.

Klinefelter and Turner syndrome are two types of sex chromosomal aberration.

Turner syndrome [discovered by Henry Turner (1936)]

- also known as female hypogonadism and is main cause of female infertility.
- It is caused due to full or partial monosomy. The missing X chromosome is due to non-disjunction during meiosis.
