(c) Mutations and its role in evolution

Mutation refers to sudden change in genes.

Role in evolution

1) It causes change in genes which can be deleterious and advantageous.

eg: change ~~is~~ of $HbA/HbA \rightarrow HbS/HbA$
is ~~helps~~ resistant to malarial infection

add few more examples.

2) It itself does not help in evolution
rather many factors ~~are~~ on it.

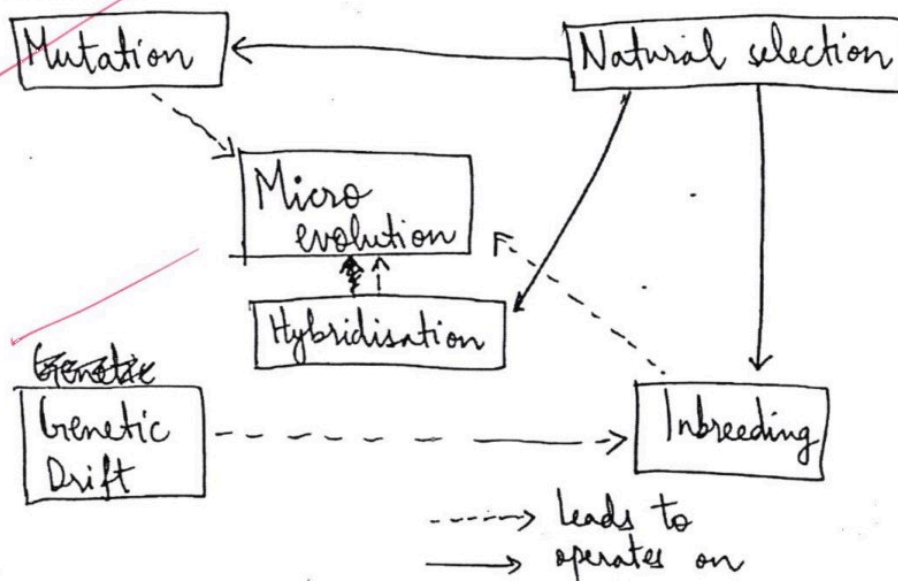

Fig: Role of mutation in evolution.
