this margin

Significance

- 1) To detect the genetic order in the person. eg: PKU
- 2) To know about risks associated with inheritance of genetic disorder.
- 3) For epidemiological knowledge and studies.

Gene Therapy

- It is a process in which a gene is inserted into an individual cell just like a drug.

Significance

- 1) It is helpful in treating diseases like sickle cell anemia, ADA deficiency etc.
- 2) Helps in advancement in medical science.
- 3) Open new vistas of knowledge regarding genes.

Hence, genetic counselling and gene therapy have ~~large~~ made huge contribution to medical sciences. With new technology like CRISPR-CAS9, more diseases can be treated effectively and efficiently.
