(e) Write a note on the effects of culture change on sickle cell anemia

10

Do not
write
anything in
this margin

Due to mutation, ~~there~~ change in amino acid in β -chain of HbA makes HbS. This condition is called sickle cell anemia.

Trait	sickleness	oxygen reduction
HbA HbA	-	-
HbS HbA	10%	10-15%
HbS HbS	65%	> 50%

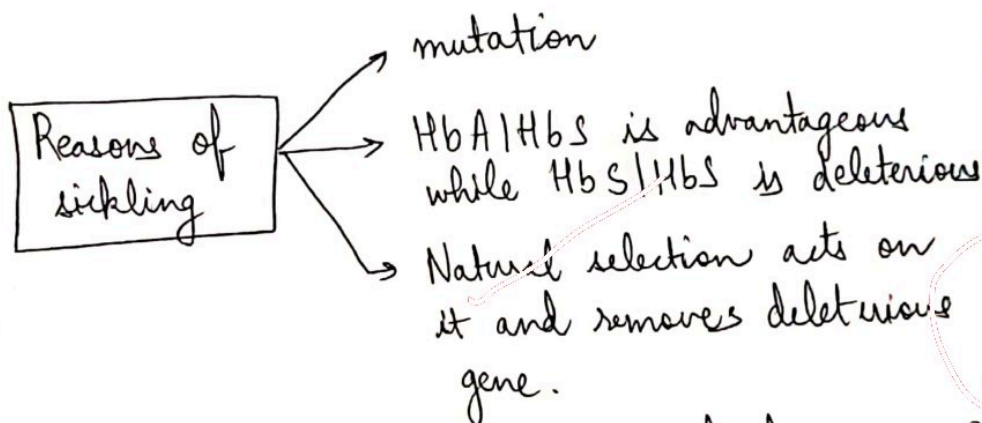

Good
Introduct
ion

• Effects of cultural change.

- 1.) The trait [HbS | HbA] is advantageous as this condition is resistant to malaria.

2) Many population of mediterranean region have become malaria resistant. However, they may face problem in high altitude region where oxygen level is very low.

3) The trait HbS/HbS is deadly as oxygen level decreases very much such that it leads to organ failure.

Hence, sickle cell anemia caused ~~due~~ may is ~~less~~ resistant to malaria and it has led many researches on its impacts on society of mediterranean regions.
