Section B

Q.5) Answer the following in about 150 words each:

10x5=50

5.a) Race Crossing in man

Race crossing refers to interbreeding between so called 'races' of the world. It is referred to as Miscegenation process.

Race crossing: Resistance

With increased globalisation & colonialism, human started moving across geographies & encountering newer set of populations.

However, the 'ethnocentric' view point of colonisers saw the simple societies as 'savages' & unworthy of being called as equal human.

Misinterpretation of Mendel's laws too provided scientific basis to racism through works of Galton, Huxley & others.

Race crossing: Beneficial to World

However, with effort of Anthropologists like Franz Boas, Margaret Mead, etc and various scientific studies like Human Genome Project, etc the 'racial myth' is now debunked.

The globe is hence witnessing the rise of newer kind of mixed populations where the ethnicity of one isn't just restricted single line of evolution.

Significance of Race crossing

- 1) It's beneficial to human evolution as it provides human with better combination of genes with increased gene pool.
- 2) Intermixing also helps in cultivating cultural relativism & fight social with like race, caste, etc.
- 3) Rise in biculturalism, multiculturalism & global citizenship. Therefore, Race crossing must not be in negative light.
