Section A

Q.1) Comment on the following in about 150 words each:

10x5=50

(a) Chronological vs Biological Ageing

Chronological Ageing is the age wherein the person has lived the time and it is universal across the time and space.

Features of Chronological Ageing

- ① It is incremental in nature.
- ② It cannot be reversed
- ③ It is permanent.
- ④ It is the physical growth.
- ⑤ It doesn't have differential growth pattern.
- ⑥ It takes into factor of mainly genes, physiology not behaviour and environment.

eg → The Birthday denotes our chronological age
 → Puberty Rituals denotes it.

Biological ageing

It is the ageing in which the person is physically and behaviourally growing.

Characteristics are:-

- ① It is both positive and negative
- ② It factors $\rightarrow$ genes, environment and the behaviour.
- ③ Not always incremental
- ④ It is depending upon the cell functional efficiency
- ⑤ It also depends upon the kind of nutrition one is having.

Eg SIRT genes enhances our DNA repair mechanism.

$\rightarrow$ KLOTHO gene $\rightarrow$ for salt absorption.

$\rightarrow$ TSP27 $\rightarrow$ for tumor suppressor.

Thus, the both the ageing has the significance in our growth.
