1.d) Sheldon's Method of Somatotyping

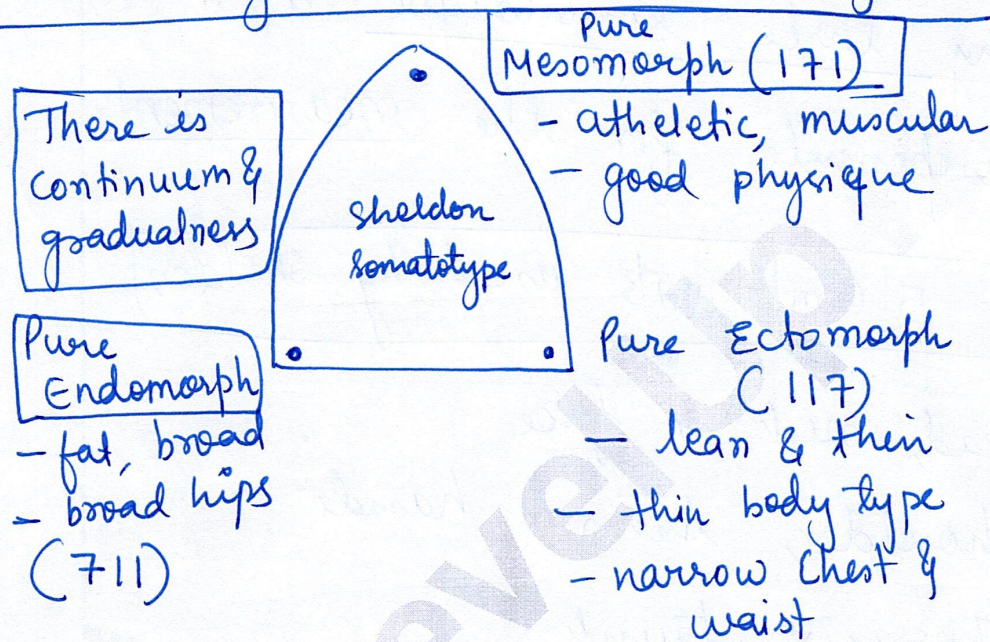

Sheldon's method quantitatively expressed the human physique using three somatotype and 5 components for the measurement.

The 5 components used by Sheldon

- ① Head, neck & face
- ② shoulder, arms & hands
- ③ Thoracic trunk
- ④ spinal trunk
- ⑤ leg, foot and thighs.

Features → He generalised the somatotype.
 → Gave universal ~~was~~ number between (1-7)
 → 3 types given by him.
 → used the photography.

He analysed the white people
in the age of 10-40 years
and gave the 3 somatotypes

Criticism → Eurocentric body somatotyping

↳ Can't be generalised as it doesn't take into factor of the environment.

↓
only used photography.

Heath & Carter method is the better method of somatotyping which was improvised from sheldons.
