

Q.6a (20 marks): How does menarche and menopause timing reflect a population's health

(Don't Write anything in this Area)

Q.6) (a) How does menarche and menopause timing reflect a population's health, environmental health and resources. (20 Marks)

Menarche means the onset of the period or menstrual cycle in the women. It usually starts when the female attains 17% of the body fat.

Menopause is the complete cessation of the menstrual cycle of the women, usually occurs after 12 months of last period.

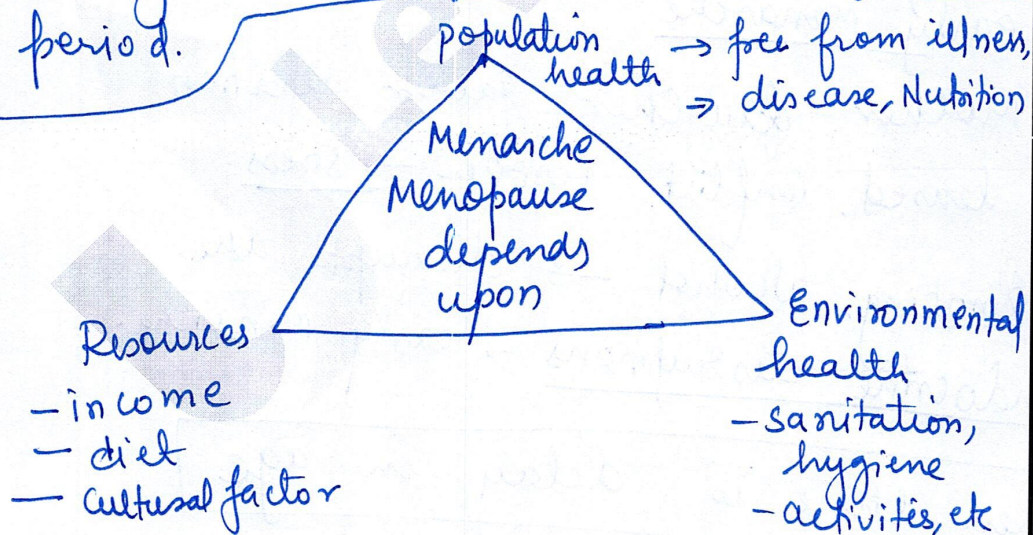

Fig: showing Triangulation of 3 Component.

For the menarche :-

If there is decline in the Age of menarche, the various Reasons are:-

- i) she is not getting proper environment at home
- (ii) stress level rises $\rightarrow$ increasing the cortisol $\rightarrow$ more hormonal change $\rightarrow$ early menarche.
- (iii) single child $\rightarrow$ more pampering $\rightarrow$ early menarche
- (iv) Mother - father - father relation $\rightarrow$ tensioned, conflict, broken $\rightarrow$ stress.
- (v) Smoking, alcohol $\rightarrow$ disrupts the endocrine disruptions $\rightarrow$ early menarche.

When there is delay in age

- (i) Better family relation.
- (ii) Less Nutrition $\rightarrow$ delayed 17% body fat.

(iii) Presence of many siblings → less food intake → delay

(iv) For female Athlete → Amnocheia delayed menarche, due to increase in testosterone or Polycystic ovarian syndrome.

(Eg) → JL Hoper & Ego Seimen studied the 20 female twins, the one who had smoking habit, had osteoporosis, bone fractures and less nutrition → fluctuations in periods.

For the menopause →

Delay in the Age of menopause.

① some genes of the women have not been able to express fully, due to environmental condition

↳ it takes time to express.

↳ Here the women has greater reproductive window

② Due to proper health check up and nutrition it is delayed.

③ Due to negative secular trend interplay of bioplasticity

decline in the age of menopause

① Impaired ovaries, eggs or organs

② To keep the energy saved for the women growth & development.

③ Better health & check up → not given
↳ issue of ovarian cancer

④ Impact of mutagens → chemicals, radiation and pollutants.

⑤ Cultural practice of emotional emptiness → Hormonal stress → declining the age of menopause.

Thus, we can see that Both menopause and menarche had the interplay of three factors.
