(c) Growth and Maturity

As per Malina, growth is quantitative change in size & parts of body.

Maturity on other hand is attainment of mental, physical and psychological stability.

Differences

Maturity

- 1) Qualitative process
- 2) Timing and occurrence vary from person to person.
- 3) Maturity can be only positive

Growth

- 1) Quantitative process.
- 2) Timing is almost similar.
- 3) Can be either positive or negative.

Puberty is a sign of maturity

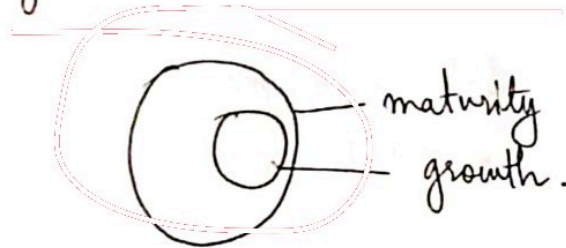

Similarities

- 1) Both process are gradual and takes time
- 2) Both genetics and environment acts on maturity & growth.
