Q8. (a) Discuss the Relevance of Menarche and Menopause and other bioevents to fertility 15

Menarche and Menopause are two bioevents to fertility.

Menarche - onset of menstrual cycle in a girl. Usually ~~12-14 yrs~~ occurs at 12 yrs age

Effects of menarche → secretion of estrogen by ovule follicles.
→ increased bone density
→ Widening of Pelvis.

Menopause - It is end of menstrual cycle. Usually occurs at 45-50 yrs of age.

Effects of menopause → secretion of estrogen stops
→ vaginal dryness
→ women cannot bear child.

• Prof. Majumdar studied Ho tribes and found out that 22% girls have late menarchy due to malnutrition.
