- 6.c) The recent Covid-19 pandemic has made the forgotten 'Malthusian fear and survival of the fittest' a reality. Analyse the statement. (15 Marks)

The Covid-19 pandemic had witnessed high mortality often realising the fact of Malthusian theory of fecundity and the Darwin concept of survival of fittest.

How Malthusian theory was reality in Covid-19 pandemic

- ① He told, that Humans are fecund and it grows geometrically but the resources are growing arithmetically.
- ② Therefore, due to this imbalance, the nature will come as solution like epidemic or Calamity to balance the Catastrophe under the Carrying Capacity of the earth.

However, it is false as the ratio is reversed, and we are growing as arithmetically.

How Survival of fittest is coming into reality

- ① One who has better immune system, survived.
- ② One whose genes are able to produce the resilience against the SARS-COV2 virus, they survived.
- ③ Nature wiped out the ones who didn't have the survival capacity in the place.

However, the situation is far beyond the biological Capacity as:-

- ① It was failure of our healthcare system and preparedness.
- ② lack of infrastructure and health related disinformation caused it.
- ③ Lack of international stewardship for mutual benefit
- ④ Technological funding in research and development is less.
- ⑤ we were not trained → socially, Culturally, economically & politically.
- ⑥ The large population → due to health illiteracy also caused the problem.

Hence, we must be prepared for future Calamity to balance the health & environment.
