(b) Behavioral cold adaptations

Anything that disturbs the Homeostasis i.e. Natural equilibrium of the body is called as stress. Acc. to laws of Thermodynamics Heat flows from High Temp $\rightarrow$ Low Temp; so whenever outside $T < 28^{\circ}\text{C}$ it is considered as a cold-stress due to our savannah origins.

< Examples >

① Use of fire: Helped H. erectus to conquer new areas
Ex: Melanesians use to stay warm

but suffer smoke diseases

Ex: Australian Aborigines sleep **L2ATM**
in between fires $\Rightarrow$ Burns
