

(Don't Write anything in this Area)

Section B

Q.5) Answer the following in about 150 words each:

10x5=50

(a) Anthropological inputs in facial reconstruction

Facial reconstruction is the process of rebuilding of the fractured, burnt or butchered face using the science of biology, anthropology and the artistry.

Anthropological inputs are:—

① Helps in analysing the Sex, Age, Cultural features of the face. (Eg) Women of Korwa tribe used to fit bangles in her lips → Can be reconstructed by the anthropologist

② It takes into the analysis of the evolution of the facial features → like prognathism, masticatory

process, sagittal crest.

③ It will also try to check for teeth, jaws → Canines or molar teeth.

↳ can answer the diet is vegetarian or the Meat eating.

④ Use of 3D and 2D model in the artistry for Criminal investigation and identification in the natural Calamities.

⑤ The AI tools are also utilised to create the faces for early investigation → Cross filtered with the anthropological ethnography of the area.

⑥ → It was used in Russian Calamity analysis.

Hence the facial reconstruction has various usefulness in the anthropological life.
