5.b) Use of Osteology in Physical Anthropology

Osteology is the field of the Medical science that is focussing on the study of the bones, skeleton, their disease and the effect which it has with muscles, tissues

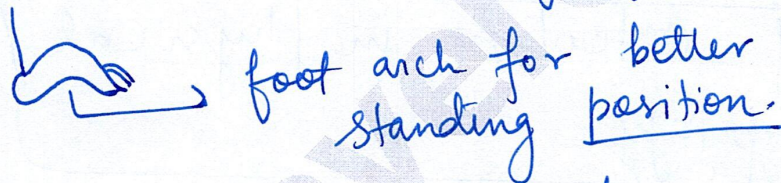

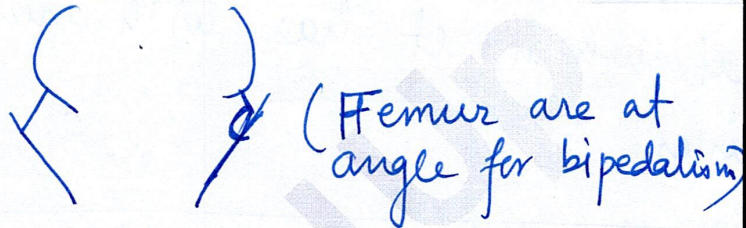

Use of Osteology in physical Anthropology

- ① Use in the personal identification through the skeletal remains.
- ② It helps us to analyse the sex, Age, burnt or cut marks on the bones.
- ③ It further help us to analyse the pre-death trauma on the victim.

④ helps us to analyse the evolutionary pattern :→ From the Quadrupeds to the Bipedalism.

- ↳ Pelvic bones are broad in female
- ↳ Narrowing of the birth canal.

⑤ It will help us know about health and disease like → Arthritis, bone fracture, nutrition like Calcium deficit etc.

However any findings must be verified with DNA analysis for better results.

Thus, we can see that how the Osteology is useful in physical Anthropology.
