(d) Nutritional Anthropology

Nutritional Anthropology is the study of socio-cultural effects on diet.

→ Improper Nutrition can lead to stunted growth and development.

Impacts

Height (cm)

Juvenile Spurt

Adolescent Spurt

Maturity

6

8

years

11

15

→ Can lead to various diseases

Ex: Excess Iron → Cirrhosis of liver

Dehydration (>5%) → Kidney Stones

Too much calcium → B3 deficiency causing Pellagra

Lack of Iodised salt → Goitre.

Basal Metabolism Rate for Surfer

→ 32 kcal/hr : children

→ 2 kcal/hr : Adult

→ 100 kcal/hr : lactating Mother

But many of these surveys are as per European Standard; hence **L2ATM**

KM (2020) has said that simply

2000 kcal $\rightarrow$ Urban Areas (+15g protein)

2050 kcal $\rightarrow$ Rural Areas

Case Studies

① Levie White (1975): People adapt to unique strategies. Ex: Papua New Guinea tribe only 4g protein

② Prior et al (1991):
South American $\rightarrow$ Soak maize in cacao
Eskimo $\rightarrow$ Fatty Diet
Melanians $\rightarrow$ Coconut Fat

③ Lee (1979): Studied 1 king of South Africa

$\Rightarrow \frac{1}{2}$ rd (Meat + Milk) + 25% Mongoose + 40% veggie

Rarely suffer nutritional stress.

④ Sindair (1953): Eskimo diet is rare in fats.

Now anthropologists realize that lack of nutrition is also a major cause of scurvy.
