Do not write anything in this margin

Epidemiologic anthropology is a subfield of anthropology that deals with determination, distribution and manifestation of diseases in human community.

Agent

Disease

Host

Environment

Scope

human factors & variations responsible in occurrence of a disease

Bio-culture adaptation to different disease.

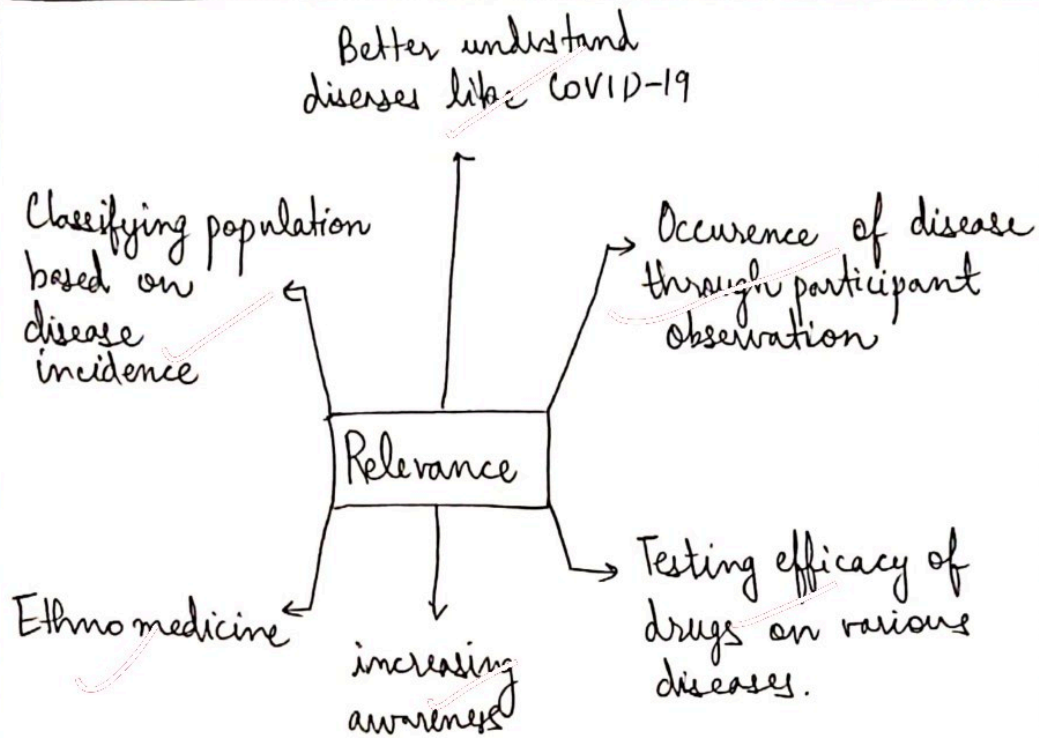

Pattern of disease distribution in a population. eg: COVID-19.

Case study (Amy Maxem, 2015)

In Sierra Leone, due to Ebola government banned burial rituals among tribes. Many tribes resisted and ~~insist~~ insisted to carry rituals. Epidemiological anthropologists ~~helped~~ convinced tribals and were able to delay those rituals due to its communicable nature of Ebola.

Good Example

Also include evolutionary perspectives of diseases

Epidemiological anthropology has huge relevance in implementing various government schemes like POSHAN abhiyaan. They can also help us achieve SDG-3: better health
