

5.d) Customary laws as a tool for environmental conservation

Nature-Man Spirit Complex
[L.P Vidyarthi] in Maler speaks of
~~coherent~~ tribal attributes of protectionism
towards environment because it is
integrated in their living cycle.

Customary laws as tool

Case study

The Hornbill conservation

in Nagaland through existing local
population lead to increased numbers through
JFM ramdang tribe of their ritualistic
duties.

The Maldhari Community of Gir forest
conservation → lion population coexistence.

Customary laws
work through

→ social control :
punishing deviances →
preventing deforestation etc

→ fear of excommunication

Bushman community. Blackbuck &
kejr tree

subjecting to ridicule/gossip etc

Environmental conservation proceeds through

- ↳ "Sacred groves" → animism
principle belief in living soul inside plants @ Santals
- ↳ "Naturism" : Bordas → worshipping of natural phenomenon itself
- ↳ Sarna tradition of tribals → towards plantation.

within context of increasingly environmental conservation [India net zero by 2070], through movements such as deep ecology wherein ecology is practised as an end in itself. The example of Salwarada Thindike (Soliga tribal women) recipient of Padma Sri is needed for environmental conservation.
