5.d) Culture is Superorganic

Culture is defined by E.B. Tyler as, 'Culture is a complex whole of knowledge, belief, art, moral, laws, customs & other capabilities and habits acquired by man as a member of society'.

Characteristics of culture as Super-organic was brought forward by KROEBER.

Culture is Super-organic because :-

1) Culture exist at an upper layer than the one who created it.

2) The human being perish but culture stays.

3) It has independent existence than the one created it.

4) Culture institutionalize itself.

5) It does not need the support of the creator for it's continuation.

This view was taken from the idea of DURKHEIM, CONTE.

Thus culture has a life of its own independent which is symbolic than genetic.

Thus these arguments support culture being super-organic.

Use thinkers : Herbert Spencer
Durkheim : idea of Social Fact
- culture controls individuals

Criticism - Alexander Goldenwiser
Sapir etc.
