

(9) "There is a lot which an ethnographer can't comprehend when he enters a culture, and a lot he can't when he exits the culture".

It shows the culture shock an ethnographer gets when he tries to study the native culture. Culture shock is the surprise element and feeling of uncertainty and conflict when ethnographers go for studying native culture.

Reason → 1. Conditioning by our culture limits understanding of new culture.

2. May find conflict in morality.

(10) Elopement by couples in Gaulisys

tribe before marriage → ethnographer
may face culture shock.

Stages of culture shock

① Honeymoon phase where ethnographer
tries to get pleasure from 'surprise'
element.

② Conflict phase - when he observes
violating culture rules.

③ Cannibalism in Aztecs.

④ Feeling of ^{acceptance} ~~isolation~~ and mental ^{harmony}
illness → when staying for long-
time gets accepted.

⑤ Back to own culture - another
culture shock.

An ethnographer can ~~avoid~~ ^{reduce} culture
shock intensity by being more
acceptable, have culture sensitiveness,
use EMIC approach.
