- Q6. (a) Discuss various types of Family in brief. Explain causes of various residence pattern of family. (20 marks)

Family is defined by Dr. G. Murdock in his book "Social Structure" as →

A social group that involves residential cohabitation, economic cooperation and reproduction. It contains members from both sex two of who maintain sexual relations and produce children own or adopted

~~Types of families~~ Various types of families are as follows :-

(Don't Write anything in this Area)

② In the basis of Residence →

Patrilocal

Eg. Shils

Matrilocal

Eg. Khazis

Neolocal

Western Societies

Average local

Eg. Nayan

Bilocal

Uxorilocal

Unilocal

give examples

③ In the basis of Authority

Patriarchal

Hindu, Muslim families.

Matriarchal

{ very rare in world.
probably Mosuo tribe is the only Matriarchal family }

Egalitarian

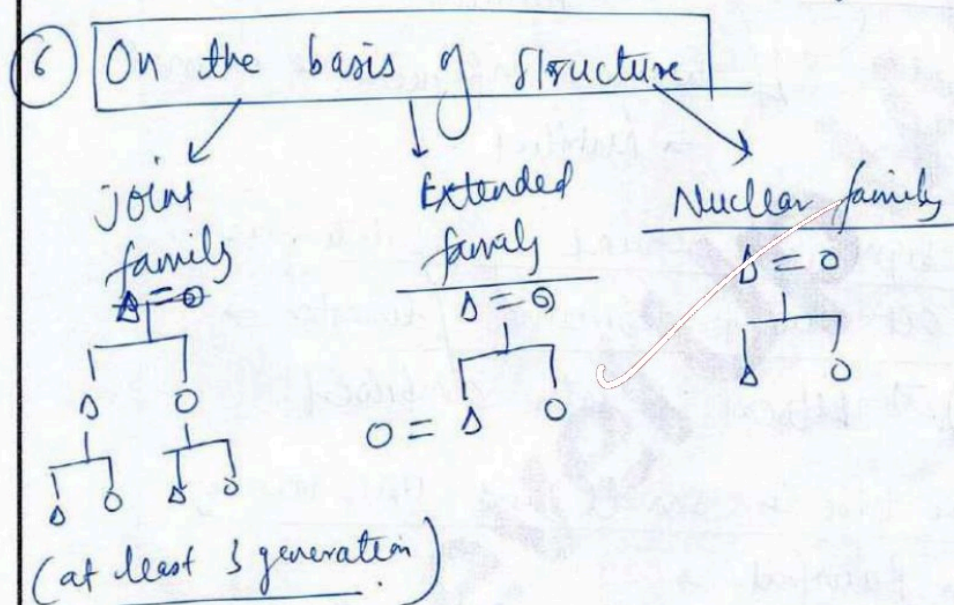

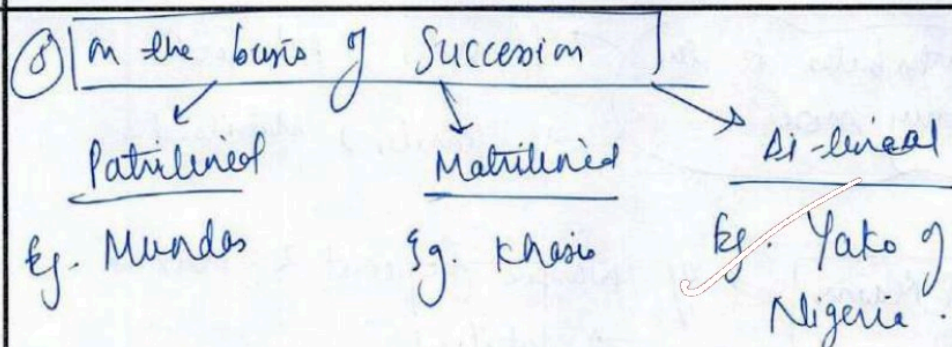

!Kung

④ In the basis of Blood ties

Consanguineal families
{ related by blood }

Affinal families
{ related by Marriage }

(Don't Write
anything in this Area)

CAUSE of various Residence Pattern of family

There are several reasons for the formation of different types of residence —

- ① Economic reasons
- ① If agrarian $\Rightarrow$ patrilocal / matrilocal
 - ② If Industrial / commercial economy $\Rightarrow$ Neolocal families
 - ③ If males involved in distant trade / migratory labour $\Rightarrow$ Matrilocal

(Don't Write anything in this Area)

② Who contributes to the economy more
 → If males ⇒ patrilocal
 → If females ⇒ Matrilocal

③ Political Reasons → If warfare frequent & internal
 ⇒ Patrilocal
 → If warfare infrequent & external
 ⇒ Matrilocal.

give examples

④ If a significant chunk of population is wiped out due to epidemic / disaster →

Eg → Samoans of South Pacific ⇒ bilocal & later ambilocal

write case studies

⑤ If the tribe is small and uncertainty in rainfall →
 ⇒ bilocal and later ambilocal.

Here, In modern times due to Globalization more & more neolocal families are coming up.

Remember there will be separate marks for good conclusion

- Q7. (a) Briefly describe the factors responsible for decline in marriage in the world and also give anthropological interpretations of live in relationships. (20 marks)

Marriage is defined by Dr. Kathleen Gaugh as the union between a woman and one or more persons, such that the child born to the woman as per the rules of the society is accorded full birth status which is provided to other members of the society.

There are various reasons for the decline in Marriage in the world :-

① [Industrialization] → It has resulted in employment based ~~into~~ economy. Women have become financially independent. They do not require the male's help for care of the child.

② [Urbanization] → Urbanization has succeeded Industrialization. Due to Urbanization

various functions that were earlier performed by the institution of marriage has been outsourced to specialized agencies.

for example → 'Creches' are used for the care of child when women go to work.

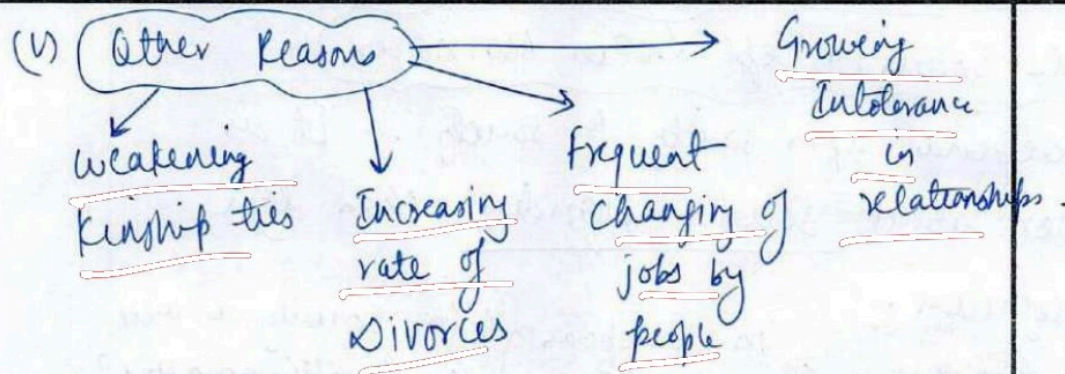

(ii) Modern democratic Institutions and Modern Education :-

It has inculcated 'Individualism' in the Society. Modern values stand for equality of men & women. This has weakened the institution of marriage.

present
case study
or
give specific
examples

(iv) Feminist Movements :- These movements agitate for the equality of men & women in every sphere of social & economic life. It stands for better status, decision making power and economic independence for women. Due to these reasons Marriages are declining.

(Don't Write
anything in this Area)

ANTHROPOLOGICAL Interpretations of live-in Marriages

Live-in Marriages can be defined as those relationships in which a couple want to live together under the same roof and involve in sexual and emotional relations ~~but~~ without marriage.

That is they are fulfilling all the functions of marriage without actually performing the marriage.

list down
these
functions

- ① Sexual
- ② Reproductive
- ③ Economic
- ④ Emotional

etc.

Reasons for growth in live-in marriages

- financial freedom; which is not available in marriage
- freedom from responsibilities of family.
- easy dissolution from relationships
- Testing Mutual compatibility prior marriage.

(Don't Write
anything in this Area)

Does Society accept Live-in Marriages?

depends upon society to society. It is more about Social recognition than legal recognition.

for instance → in European societies { both socially as well as legally accepted } ✓

→ in Indian society { only legally accepted, NOT socially accepted } ✓

Live-in : A threat to Institution of Marriage

It cannot be called a threat right now because the prevalence of live-in in Indian society are less. Moreover in Western societies too, live-in are just to check the mutual compatibility between the partners. They are only a predecessor to Marriage.

To conclude, whether a Marriage or a live-in, the foremost function it should play is the protection of Interests of Both the partners.

may be you can conclude that marriage as an institution is in constant evolution to accommodate new forms of marriage.

Q.2) a) Discuss in detail the "laws of marriage" with suitable examples.

(20 Marks)

Acc, to 'Notes and Queries' Marriage is an association b/w a man and woman such that the child born to the woman is the legitimate offspring of both the parents.

→ Every society have formed different rules to regulate the institution of marriage and such rules are k/as "Laws of Marriage".

Such laws are

① Endogamy - It is such a law of marriage in which a person can marry only in his/her own social group. The different types of Endogamy are -

- Caste Endogamy (Among Hindus)
- Tribal Endogamy (Gond + Santal)
- Moiety Endogamy (Todas of Nilgiri)

- Village endogamy (In North Indian villages)
- Clan Endogamy (In western countries)

② Exogamy → A person has to choose his/her spouse out of his/her social group. Different types of exogamy are -

- Village Exogamy (In South Indian villages)
- Gotra Exogamy (among Hindus)
- Lineage exogamy (among Hindus)
- Moiety exogamy (Tlingit of Alaska and Karkuias of M.P.)

③ Hypergamy → It is also known as Anuloma. In hypergamy, a girl person marries a person of higher caste group so as to

increase her caste status and the status of a woman is defined by her husband.
→ Manu has prescribed Anuloma.

④ Hypogamy → It is a marriage practice in which a woman marries a person of lower caste group. It is also known as "Pratiloma". This marriage practice is prohibited by Manu in his book "Manusmriti".

⑤ Incest Taboo → Incest means marriage b/w closely related kins. The nature of close kins vary from society to society. Generally, Incest is practised b/w Father-daughter, Mother-son and brother-sister. Incest is Tabooed in almost all societies.

→ Different theories are given why trust is practised-

- ↳ Childhood Familiarity Theory by Westermarck
- ↳ Family Disruption Theory by Malinowski (Functionalist)
- ↳ Kin Enhancement Theory by E.B. Tylor
- ↳ Inbreeding Theory by "David Aberlie"

Thus, one or other law of marriage is a part of every society.

b) Recently the French government has criminalized incest owing to sexual assaults. Discuss the genetic & psychological ramifications of incest. Should it be criminalized worldwide? (15 Marks)

Incest means the marriage b/w closely relation kins. It is defined as sexual activity b/w kins such as father-daughter, mother-son and brother-sister.

Incest is Tabooed in almost every society and is often prohibited by law in different countries.

Recently, the French government decided to criminalised the incest due to its harmful ramifications. Many European countries have already criminalised incest due to its ill effects on the society.

Genetic Ramifications of Incest Taboo

→ Members of a same family are carriers of many recessive lethal and semi-

- lethal genes and inbreeding among the closely related kins increases the chances of its becoming dominant in the offspring.

→ Incest can result into chromosomal aberrations and can result into different disorders.

→ Example - Anish in Pennsylvania has experienced six-fingered dwarfism due to inbreeding.

→ Various genetic disorders can take place due to incest taboo and thus hinders the proper development of future generations.

Psychological Ramifications of Incest

→ Incest can lead to sexual aberrant among the children.

→ The sexually abused children face a mental trauma and its results into anxiety, fear, depression, suicidal thoughts among many.

→ It hampers their cognitive development due to the trauma they face due to sexual assault.

→ It also affects their self esteem and dignity and hampers their free development and also violates their Fundamental right of Right to dignified life.

Thus, by taking the ill effects of trust into consideration, the practice of trust should be criminalised world wide.

c) Is culture unique to human beings? Critically analyse.

(15 Marks)

E.B. Tylor in his book, "The Primitive Culture" has defined culture as that complex whole which includes knowledge, art, moral, customs, traditions and any other capabilities and habits acquired by a man as a member of society.

→ Acc to Herskovits, "Culture is a man-made part of his environment"

* The above definitions indicate that culture is unique to human beings.

* But "McGrew" argue that the primates of higher order also shows the basic characteristics of culture. He indicated towards below mentioned studies-

① Use of Tools by Apes

② Gestural communication among Chimpanzees studied by "Jane Goodall."

③ Japanese Monkey Potato washing by Kawai

④ Ai project of Kyoto University which studied the chimpanzees playing computer games and also helping others to learn.

From the above, it can be concluded that Apes also possess cultural characteristics.

* But Louie. A. white argued that the ability of symbolise does not mean to learn few symbols, but to freely and arbitrarily bestow meaning among such things. He argued that primates generally use sign-language which is instinctive that learned.

* Michael Tomasello also argued that humans are ~~an~~ only primate who can pool their cognitive abilities and

bring modifications in their cultural tradition.

→ Julian Steward through the concept of "Culture-Ecology" mentioned that humans have the ability to change their culture to suit the changing environment / surrounding which is missing among other primates.

Thus, presently we can concluded that culture is unique to human beings.

ForumIAS

(Don't Write
anything in this Area)**Section- B****Q.5)** Answer the following questions in about 150 words each: (10 * 5 = 50 Marks)**a)** Descent & Alliance Theories in Kinship

(10 Marks)

The concept of Descent was explained by Meyer Fortes. According to him, the word descent is related to one's ancestry.

Descent generally signifies one's relation to one's ancestor and also signifies the inheritance pattern. Different types of descent are -

- Patrilineal Descent (Male line)
- Matrilineal Descent (Female line)
- Ambilineal Descent (Choose band descent)
- Parallel Descent (sons inherit from Father and daughters from mothers)
- Cross Descent (sons → mother, Daughters → ~~mother~~ father)

Thus, Descent decides the group membership and also the inheritance pattern.

*The Alliance Theory was given by Levi Strauss in his book, "The Elementary Structure of Kinship"

→ It studies how "inter-familial" and "inter-descent" group relations are developed.

→ Acc to him, as there is marriage taboo, one has to choose a one's spouse from other families or descent groups.

→ This also leads to a cycle of exchange of women b/w different descent groups and a relation of affinity is developed b/w different families.

→ The Alliance theory also supports the kin Evolutionary Theory of E.B. Tylor

Thus, Descent and Alliance theory has huge significance in kinship studies.

b) Indigenous economic systems & their types

(10 Marks)

There are different indigenous economic systems employed by different diff indigenous groups for their sustenance and survival.

Indigenous economic system generally lacks the surplus and are merely performant for the subsistence.

Different Indigenous Economic System

① Hunting and gathering

↳ Food is gathering from nearby forests and small animals are hunted through primitive tools

eg → Inuit of Arctic region
→ Bushmen of Kalahari Desert
→ Bishnois of Jharkhand

② Fishing

↳ They generally live nearby the water bodies and supplement the hunting and gathering with fishing

↳ Eg → Shashone of Amazon Basin
↳ Veddars of Ceylon
↳ Lodhas of W. Bengal

③ Pastoralism

↳ They rear sheep, cattle, goats etc and generally perform transhumance
↳ Eg → Masai of Africa
↳ Gaddi & Gujjars of Himalayas

④ Swiddening

↳ Slash and burn agriculture is practised with the help of axe and sickle.
↳ Eg → Jhum cultivation by Malas

⑤ Agriculture

↳ a settled agriculture and production of horticulture is done and is an evolved economic activity.
↳ Eg → Gondh, Santhals, Khari perform this.

One or other economic activity is a part of every indigenous group.

c) Segmentary Lineage

(10 Marks)

Segmentary lineage is a form of stateless political organisation. There is an absence of centralised agency in stateless societies.

→ Segmentary lineage is a form of tribal political organisation. It is generally a feature among primitive tribal and ethnic groups.

→ The segmentary lineage society is divided into different lineages who trace their ~~an~~ descent from a common ancestor each. They are also to establish their ^{genealogical} relation with their ancestor.

→ "Each lineage" has its own head and such head administers his respective clan and there is no common head for all the lineages.

→ These lineages are generally mutually hostile and most of the times the conflicts are resolved through the Blood Feuds. The issues are generally resolved by a respected head of a neutral lineage.

→ This type of political system generally prevail among -

- Nuer of Sudan
- Tu of Nigeria
- Masai of Kenya
- Kuma of Malawi etc.

Segmentary lineage then is important feature for smooth functioning of many tribal societies.

d) Ways of acquiring mates in tribal societies

(10 Marks)

Every society prescribes certain norms through which an individual can acquire a mate. In simple societies, the different ways are -

① Marriage by purchase → The groom's Family pay bride wealth to bride's family and gain rights over sexual services & progeny.

eg → Nuer and Mursi pay cattle as bride wealth.

② Marriage by Capture → The man captures a woman for the bride's family and represent valour and bravery.

eg - Nagas

③ Marriage by Elopement → Couple marry in a secretive fashion away from family.

eg - Lein in Korbis of Aram

④ Marriage by Probation → It is like modern-live-in relationships. The couple live together for sometime to check their compatibility
eg- Chotanagpur tribes call it Raazi-Khusi

⑤ Marriage by exchange → Two households exchange woman due to high bride prices
↳ eg → Tiv of Nigeria, Koya of Andhra Pradesh

⑥ Marriage by trial → The man has to prove courage and bravery by performing some task to win girl's hand.

↳ eg - Bhils call it "Gol Gadhudo"

⑦ Marriage by consent → by mutual consent and is present in negligible tribes.

α — α — 1.

e) Filiation & Complementary Filiation

(10 Marks)

According to Meyer Fortes, one's relation to one's parents is known as Filiation.

→ In patrilineal society, one's filiation is to one's father and in matrilineal society, one's filiation is to one's mother.

→ When one's filiation is to one's father, then one can inherit property, common name etc from his father i.e. the inheritance is from father and son.

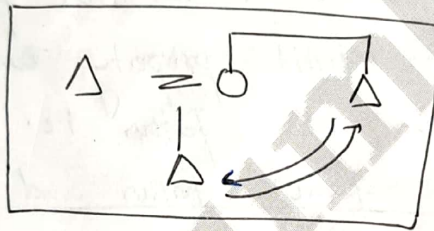

→ But if one's filiation is one to one's mother, then one inherits property and name from mother.

Complementary Filiation

→ A person is affiliated to one's mother or one's father but it does not mean that the other side of parentage are totally ignored.

→ One has emotional bonds and social ties with such kins which signifies complimentary filiation.

→ Acc to Meyer Forester, the relation b/w mother's brother and sister's son in patrilineal societies signifies complimentary filiation.

Complimentary filiation

→ "Goody" remarked that if one's filiation failed then one can seek help from those with whom one is complementarily filiated.

→ In this way, complimentary filiation is also important as filiation.

c)

As per Abercrombie, kinship is defined as the social relationship derived from blood ties (consanguinal) and marriage (alliance).

Kin terms are the designations assigned for establishing role to the individual in kinship ties.
for example father, mother, niece, uncle.

History L. H. Morgan in his study on Iroquois Indians defined kin terms through his work "System of consanguinity and affinity in society".

Description classification as :-

- 1) Descriptive - where each kin relation is uniquely allotted kin term. for example mother, mother-in-law

2) Classifactory - it is further classified
into two types :-

a) Malayan - for example

mother
mother's sister } same term
father's sister } ('mother')

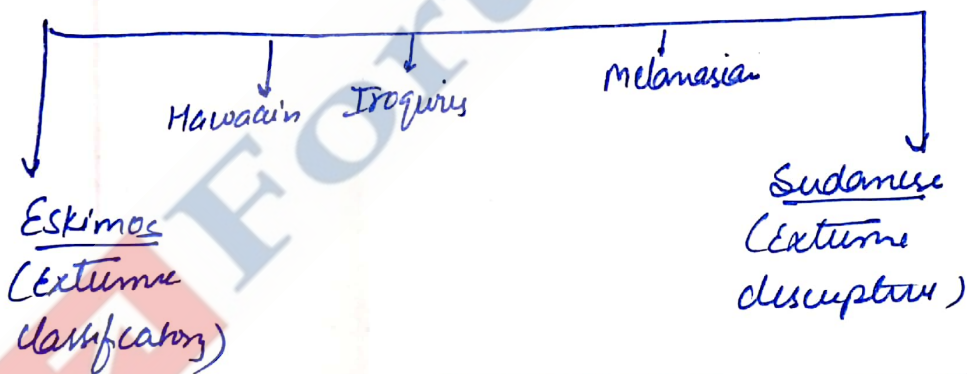

b) N. American - for example

mother
mother's sister } mother

less classification than Malayan.

Morgan being evolutionist highlights :-

Malayan → N. American → Descriptive.

Determinants of Kin terms

1) Generation - father - son

2) Sex of speaker - In Hindi society

different terms for boy and girl speak.

- 3) Sex of relative - for ex. father - mother
- 4) Relative age - for ex. In khalga - 'Anni'
for older brother
- 5) Affinity - for ex. father, father-in-law
- 6) Bifurcation - for ex. $\left\{ \begin{array}{l} \text{maternal} \rightarrow \text{'Nani'} - \text{'Nani'} \\ \text{Paternal} \rightarrow \text{'dada'} - \text{'dadi'} \end{array} \right.$
- 7) Collateral - for ex. father, uncle.
- 8) Descent - different for alive and dead
- 9) Polarity - for ex. Aunt, Niece.

Kinship terminology ascribe certain
role and responsibility such as
mother's brother towards child.

Level Up

Page 3 of 80

(Don't Write

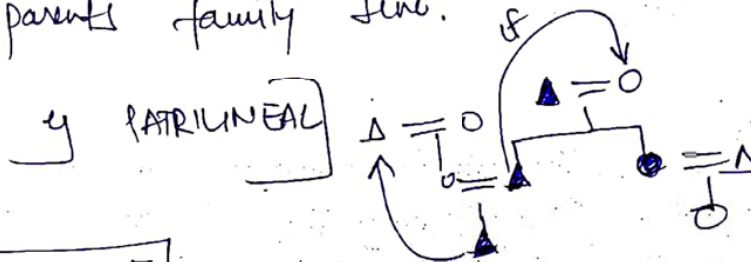

anything in this Area)

(b) Relevance of complementary filiation.

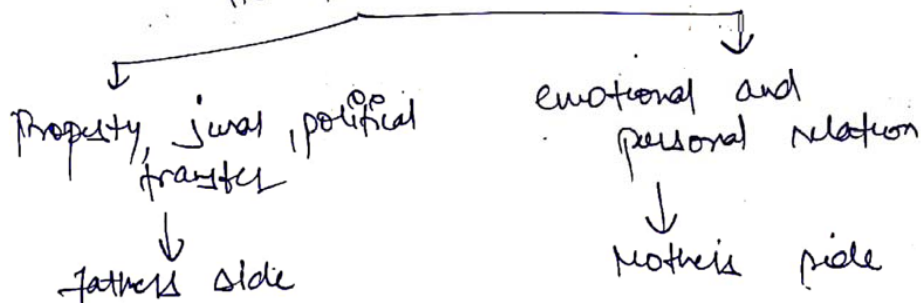

(10 Marks)

Filiation is the process by which ego is assigned descent group either through father/mother line based on rules of descent.

Complimentary filiation is a type of filiation in unilineal descent groups where the ego traces descent from one line but has strong relations with other parent's family line.

RELEVANCE

CASE: Meyer Fouts, in his study in Tallensi (Ghana) noted that ego has strong emotional bonds with mother's family line. He found that

Jack Goody noted that often, transfer of property happens via complementary filiation.

OTHER RELEVANCE

➤ provides social insurance against breakdown of family

eg - children can stay with mother's family in patrilineal groups

ii) provides INDIVIDUALITY & INDEPENDENCE

iii) Act as a psychological release valve

iv) Act as mediators during conflicts

[eg] Matrilineal side settles New Blood-Feud.

v) Structuralist → ensure social continuity by strengthening the stability

vi) Functionalist → Such filial groups exist to fulfil needs of the person.

Today, the term is very relevant due to rising divorce, stress, suicides.

(d) Matrilineal Puzzle

(10 Marks)

Matrilineal puzzle is a situation wherein a matrilineal society has a potential of conflicts between a woman's brother and her in-husband.

Puzzle Robin Cox has noted following functions that marriage must perform

- | | | |
|-----------------------------------|--|---------------------------------|
| ①
Impregnation of women by men | ②
Male control over economic property | ③
Incest taboo (ie. exogamy) |
|-----------------------------------|--|---------------------------------|

In order to fulfil ③, men have to be brought from outside. But in order to fulfil ②, husbands should abandon economic control, else brother and husband will be in conflict.

This may lead to

- instability in society
- collapse of matrilineal order

Many societies have evolved mechanisms to fulfil all 3 conditions

eg] Kathleen Gough noted that the institution of marriage is loose in Nayars where visiting husbands have no control over women's properties

eg] Lela Dube studied matriliney in Lakshadweep (Islam) tribes and noted that the tribes follow some parts of patrilineal (Islam) and matriliney.

Thus, matrilineal puzzle is solved by societies in different manners. As per structural functionalists, such adaptation is a means to ensure social stability.

Q.7a (20 marks): Factors responsible for decline in marriage and anthropological interpretations of live-in rela...

Level Up

Page 61 of 80

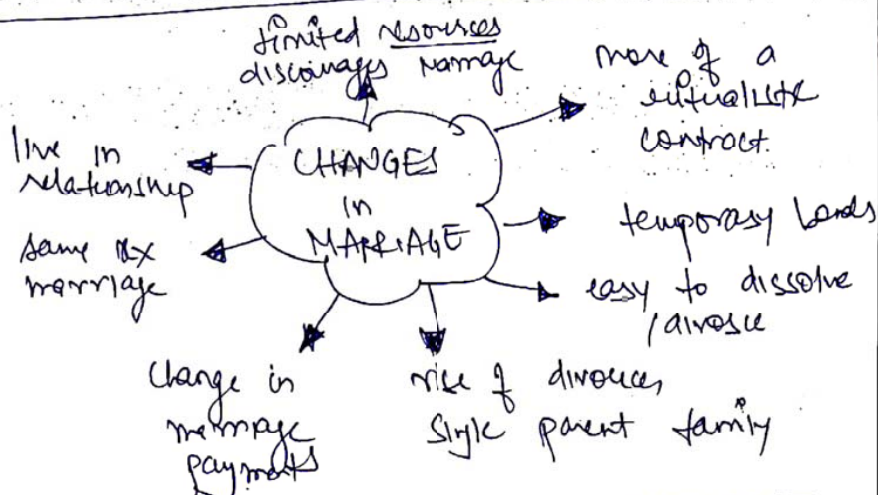

(Don't Write
anything in this Area)

- Q7. (a) Briefly describe the factors responsible for decline in marriage in the world and also give anthropological interpretations of live-in relationships. (20 marks)

Marriage (Latin - matrimonium), defined by Kathleen Gough in 'Nayar and definitions of marriage' (1959) as - relationship between 1 woman and ≥ 1 men which provides that a child born as per rules of kinship is awarded full birthright status.

Marriage is both a social institution and group and is a universal phenomenon

However, the institution has been changing due to several factors

FACTORS RESPONSIBLE

① SOCIAL

- Restrictions post marriage due to customs, patriarchy discourages women to marry
- Increase in personal aspirations combined with limited resources
- Industrialisation and urbanisation

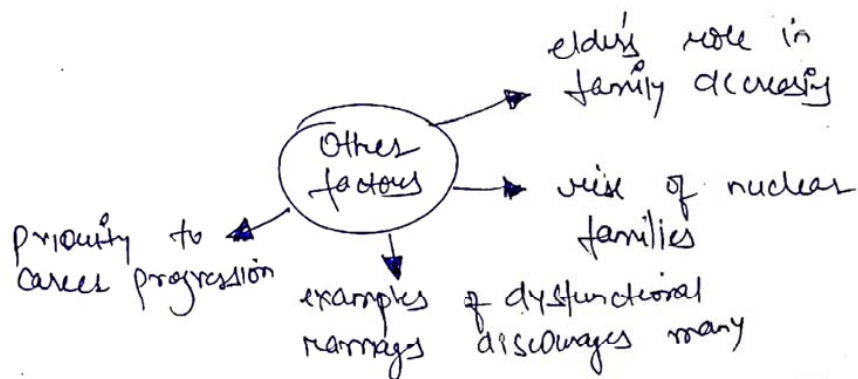

More contractual form of marriage with economic ~~total~~ independence of members

② ECONOMIC

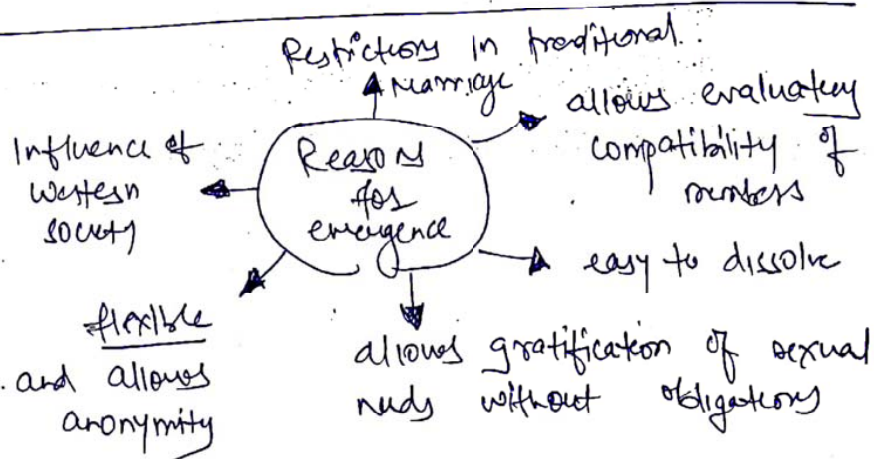

- limited income — difficult to rear children
- Economic independence of women — more assertive of her rights

③ INSTITUTIONAL

- Lack of jobs for pregnant women + difficult to re-enter post birth
- Stressful lifestyle

Live-In relationships is a recent form of marital arrangement where couple lives together and has mutually agreed sexual rights but without any formal contract, economic dependence

Anthropological Analysis

Although live-in satisfies 2 of Murdock's criteria

- i) Sexual gratification
- ii) Cohabitation

but it fails to provide

- i) Economic dependence
- ii) Mutually coordinated child socialisation

live-in can never replace institution of marriage because

- i) Social acceptance is very low
- ii) It does not provide stability and emotional support as Marriage
- iii) It leads to loose filial and complementary filial ties

However, since right to choose one's life partner is a fundamental right (Hadiya case), live-in must not be suppressed if the members willingly agree.

Kinship and power.

(10 Marks)

Abercrombie defines kinship as social relationships derived from blood ties (real or supposed) and Marriage. This affects power structure through political and economic spheres.

① Based on Patrilineality / Matrilineality

- Descent rule affects concentration of power.
- Matrilineal: Power usually rest in hands of sisters brother (uncle).

Ex Seim System found in Khasi of Meghalaya.

- Patrilineal: Power usually lies in hands of eldest male.

Ex Idike system in Yoruba of Nigeria.

② Monarchy.

- Power is transmitted through progeny.

- Immediate (Primacy) Kin transmit power.

③ Lineage based:

- Power usually lies with Minimal lineage due to Segmentary divisions.

[Ex] E. R. Titchard (1940) study in New.

④ Clan based:

- Power lies in a group of clans, each performing a specific function.

[Ex] Winnebago red Indians of Wisconsin: Thunderbird Clan (Peace), Warrior Clan (Defence).

→ Since Descent and Kinship is a Cultural Rule, as propounded by Descent theory too, Kinship plays an important role in Power dynamics.

Elucidate the determinants of kinship terminology.

(15 marks)

Kinship Terminology is defined as the terms kins use to refer to other kins and studies related to it. It is instrumental in studying kinship behaviour and dynamics.

Determinants of Kinship Terminology.

① Kroeber and Louis :

In a 1929 published paper, Kroeber identified following 8 determinants. Louis added 'Polarity' as 9th one:

① Generation: Difference in generation changes kin terms. Very widely followed by societies

Teg Father and son.

- ② Collaterality : Different Kins in same generation have different terms.
eg father and uncle.
- ③ Sex of Kin : affects kin terms in large number of societies.
eg Father-Mother.
- ④ Polarity : suggests how kin terms exist in pairs.
eg niece-aunt.
- ⑤ Sex of Speaker : found in less number of societies. eg Haida foragers, girl and boy address father with different names.
- ⑥ Affinity : changes the kin terms based on Marriage. eg ~~Nana Nani, Dada-dadi~~ father-in-law.
- ⑦ Relative Age : younger and elder are addressed differently. eg Telugu, young brother is called hammudu and elder anna.

⑧ Bifurcation: Kin terms change as per relation from mother or father side

eg) dada-dadi, Nana-Nani.

⑨ Descent Kin terms change when a person dies.

⑩ LH Morgan: in his book and papers

identified two determinants:

- ① Classificatory Kin terms.
- ② Descriptive Kin terms.

→ As marked by WHR Rivers and Radcliffe Brown, study of Kinship terminology and determinants which affect it are important to study Marriage practices, social structure which may even be non-existent today.

- (c) Discuss different form of preferential marriages with examples from tribal societies in India. (15 marks)

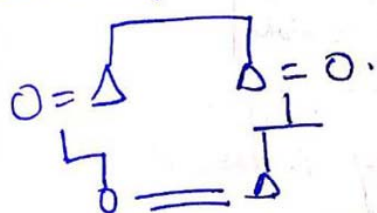

Rodney Needham in his book 'Sentiment of Structure (1962)' classified Rules of Marriage as Prescriptive, Proscriptive and Preferential.

Preferential Rules of Marriage

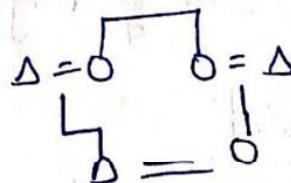

These rules determine or suggest the kin groups, a person may prefer to marry. These are of following kinds:

- (i) Cousin Marriages Refers to marrying of son and daughter of siblings.
- (ii) Parallel Cousin Marriage: Son and daughter belong to two brothers or two sisters.

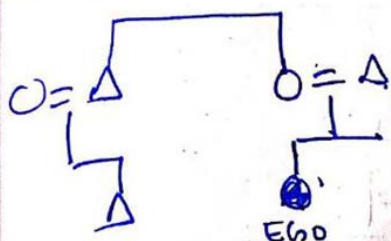

(ii) Cross Cousin: Marriages: Son and daughter
belong to a sister and brother.

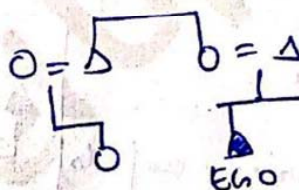

Patrilateral Parallel
Cousin

Matrilateral Parallel
Cousin

Patrilateral Cross Cousin

Matrilateral Cross
Cousin

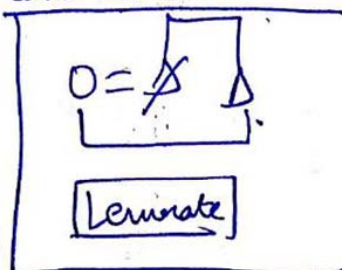

Example, Parallel: Kharia, Oraon, Konds
Sunni Muslim

↳ Cross Cousin: Chakma of Manipur, Chippewa.

② Levirate: Refers to marriage ~~between~~ to
wife of deceased brother. This is
usually preferred in closed systems.

For custody of children and economic reasons.

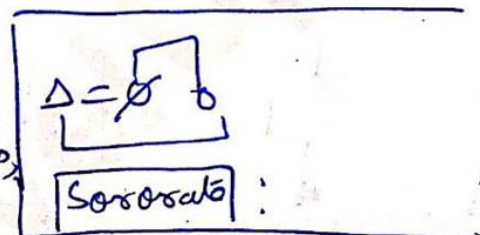

[Ex] Chukchee of Siberia,
Bairagi, Sikhs of Punjab.

(3) [Sorosato]:

Refers to marrying sister of deceased wife or sister of a childless woman. Usually a part of Polygynous societies.

[eg] Khazis.

In contemporary world, due to genetic studies

people are becoming aware of pitfalls of preparental marriages due to which they are not being prevalent and are largely on a decline.
