(b) Elucidate the determinants of kinship terminology. (15 marks)

As per Ambercrombie; "Kinship" refers to set of relationships based on blood (real or supposed) & marriage (alliances).

origin of kinship terminologies can be traced to Morgan's study of Seneca Indians elucidated in his work

"Consanguinal and Affinal relations of Human Societies" 1940.

In this work; Morgan gave 2 Kinship^{term} classifications :-

Classificatory :- Mother & Mother Sister had same Kinship term's (Savage).

Descriptive :- Kinship terms used by European communities (Civilization).

Determinants of Kinship terminologies:-

① Language :- types of word's available in society

a) Descriptive :- pin point to a particular relation exactly.
e.g Father, Mother

b) Classificatory :- group of individuals are referred by same kin terms.
e.g Cousins, Uncle, Aunt, Amma

② Mode of use :- How kin terms are used for communication

a) Mode of reference :- How kin term's are referred to in day-to-day usage. e.g Cousins refer to numerous kins in social relation.

b) Mode of address :- How kins are

addressed in social settings.

e.g. Nani & Nani Amma mean 2 different individuals.

③

Such Kinship terminologies reflect the presence of varied terms between the 2 extremes of classificatory & descriptive continuum; thereby ensuring presence of varied terms for same kins in society.
