- (c) Briefly discuss the characteristics of Food Producing Societies with appropriate examples. (15 marks)

Dr. Majumdar has described various economic activities (Modes of subsistence) in simple societies.

Eg. Hunting - gathering, pastoralism, fishing, etc.

Food producing societies are the one which are involved in producing plants for their food requirements.

Hence, they can be classified into 3 types

- Shifting agriculture societies
- Horticulture based societies
- Agricultural societies.

① Shifting Cultivation Societies →

also known as Jiridening, Jhum cultivation, etc.

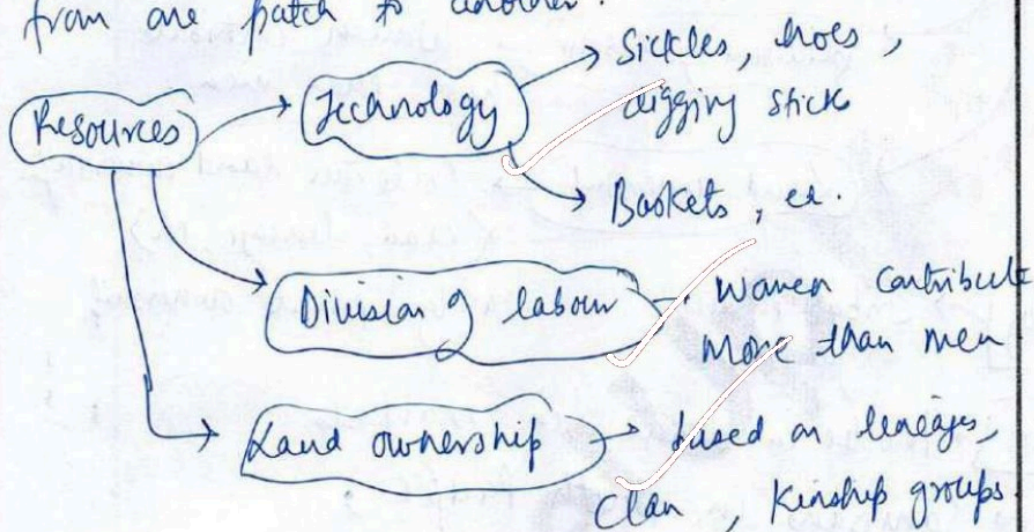

Methodology : clear a forest patch → produce plants → harvest → leave the patch for some time

Cultivation in a new patch of forest.

you are not supposed to write here

population → Low in numbers, population density is also less. ✓

Less sedentary life as they have to move from one patch to another.

Food security → plenty of food available, no insecurity

Polity → Tribal political organization present.

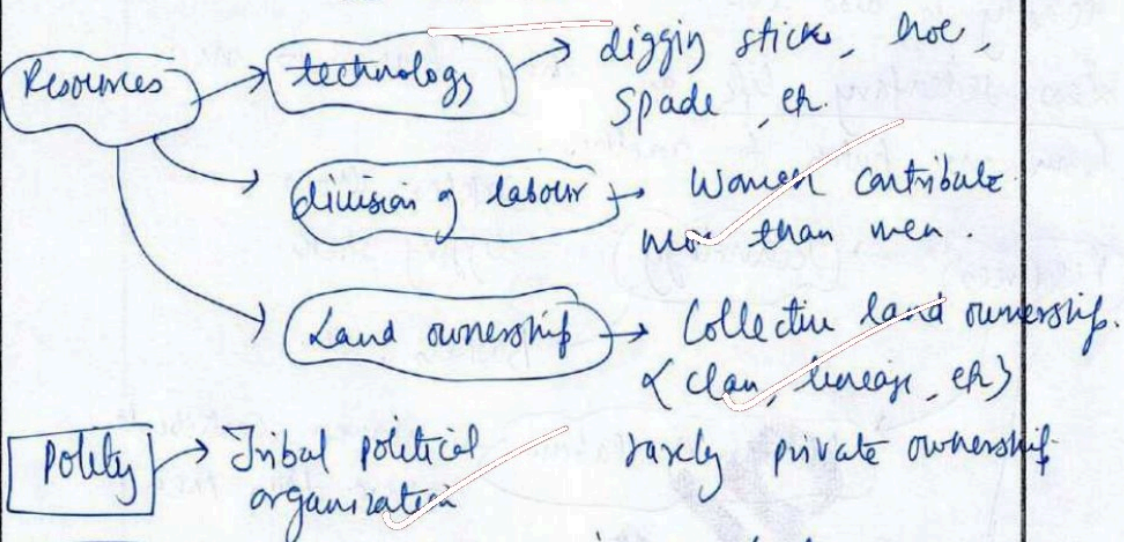

EXAMPLE → Apatanis in Arunachal, Khasi, Naga tribes. ✓

② HORTICULTURE →

Produce fruits, seeds, roots, bananas, barley, maize, pulses, etc. ✓
