

(c) Division of labour by gender.

(10 Marks)

Division of labour by gender, age etc has been proved from early hominids

e.g. - Australopithecus had a loose male-female union wherein female collected food berries and took care of offspring while men went on hunting

In present societies

(i) Hunter Gatherers

male go on day group hunting while female

- collect fodder
- raise offspring

(ii) Horticultural

Here, role of women is prominent as collector of fruits and flowers while men support females in processing

(iii) Agricultural

Here too, traditionally men did the labour in fields while women did help in harvest, storage, etc

(iv) Industrial Society

a) Manufacturing

→ dominated by men in smaller cities due to
 • Patriarchy • Lack of education
 • Social norms

b) Service sector

→ Here women perform similar work as men and have proved to be equal

eg - BPOs, education, health

CHANGING TIMES

⑩ Lack of resources, deforestation is forcing women in hunting families to accompany men - Bushmen, Bishas

⑪ Agricultural census noted that feminisation of agriculture is taking place (~17% land by women)

⑫ Labour intensive sectors are increasingly occupied by women.
