- (c) Briefly discuss the characteristics of Food Producing Societies with appropriate examples. (15 marks)

Food is one of the important constituents; necessary for Human survival and mankind has since age of Neolithic Revolution (V.G. Childe) embarked upon maximization of its food-producing capacity.

① Horticulturalists :- production of fruits and vegetables in larger quantities.

origin :- Middle east around Neolithic period.

- Can support higher population density
- Are mostly sedentary in nature.

- Division of labour
 - Men: clear the field's
 - Women: plantation & collection of fruits & vegetables.
- Medium of exchange is present due to surplus production
- Presence of Chief in case of Chiefdom's
 e.g. Zuni in North America
 Muria Gond of Central India

② Agriculturists :- production of food cereals and domestication of animals.

Origin :- Natufian Valley of Middle East.

- Support to high population density.
- Territorial & sedentary in nature.
- Clear-cut division of labour.
- Extensive presence of market principles.

- Presence of full-time political authority to safeguard trade & territory.
e.g. Santhals; Oraons & Ho of Chhotanagpur.

⑦ Swiddening:- also known as 'Thum' cultivation.

- Support to lesser density population.
- Can be nomadic or semi-nomadic.
- Division of labour
 - Men clear & Burn the forests.
 - Women spread the seeds on Burned fields.
 - Children help in keeping clear of wild animals.
- No presence of full time authority.
e.g. Tribes of North East.

Various food producing methodologies by different societies reflects the cultural values present in those societies.
