

1.c) Religion and Culture Ecology

Culture Ecology was given by Julian Steward.
It reflects how the culture core of tech-environment affects the 2^o institutions like religion.

Culture ecology directly affects religion as

① Ecology determines the religious practices of a religion.

(eg.) Subak system for Bali → water temples as high rainfall and use for agriculture.

② Ecology helps in social control via religious systems.

(eg.) To stop over hunting amongs Sans of Africa, use of religious myths

③ Ecology defines the religious practitioners and their social status.

(eg.) Amongst Nuer, leopard skin chief has high social status as ecology of

agriculture making dependence on religious totems → chief is represented by totem and helps solve disputes

Religion also affects the ecology

① Roy Rappaport ⇒ Religious practice of killing Pigs after uprooting Rumbine amongst Tsembaga ⇒ Causes change in pig population

② Religion determines the relation and protection of by individuals of ecology

(eg) NMS Complex by LP Widyarthi shows high role of nature in lives of Birkhars

~~Rel~~ Cultural ecology is threatened due to rising industrialisation. Religions practices like Sarna show how living along with ecology we can ensure sustainable development.
