

geography limits a cultural expansion
He gave concept of geography and culture
relations.

He studied forms of baw and arrow
in Indonesia and West Africa and concluded
that "FORMS" of material remain
same.

(2) Frobenius :-

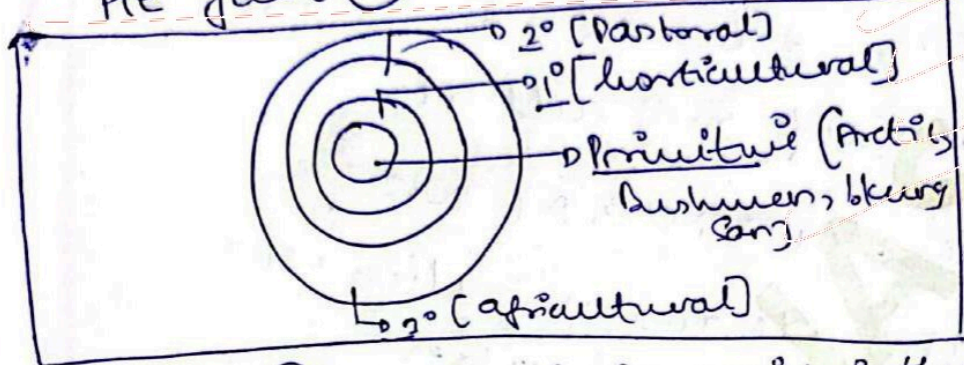

Student of Natze elaborated on
study compared baw arrow, musical
instruments of Indonesia.

He gave the following theory:-

- 2.1) Man is uninventive and
traits get borrowed
- 2.2) There is no psychic unity
of mankind
- 2.3) Geography can limit adoption
of traits

③ Schmidt adopted "historic" perspective

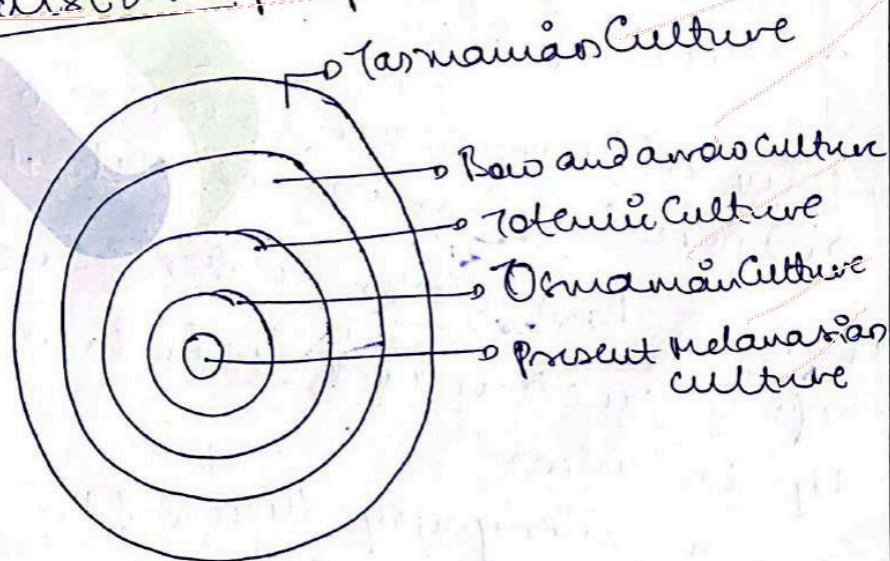

He gave ④ culture circles

He said ④ such circles exist in the world and historically have developed and diffused culture to various areas.

④ Graebner study in Melanesia

Applying this theory he studied historic perspective of the diffusion

Primeral culture

He said that from various culture circles these traits had diffused and caused "new methods" of adoption of culture.

The Idea of MIGRATIONISTS :-

- 1) Trade and migration were carriers of traits.
- 2) Culture did not evolve individually alone but underwent some local adaptations.

Criticisms of School of Thought :-

- ① It was difficult to formulate culture circles.
- ② Too much dependence on 'museum methodology'.
- ③ Why diffusion occurred, the reasons and mechanism was not elaborated.

Franz Boas, Clark Wissler, Kroeber gave concept of "culture area" to further study diffusion.

In many ways theory gave impetus to "Multilinear Evolution of Man".
