

(Don't Write
anything in this Area)b) Contribution of Stephen Tyler to school of Cognitive AnthropologyCognitive Anthropology aka ethnoscience

or New Ethnography is an approach to study of culture by attempting to learn the native's point of view.

Brief on Cognitive approach

→ it was inspired from Sapir-Whorf hypothesis.

→ it says that culture is a mental model and job of ethnographer is to duplicate the mental model by getting into mind of natives.

→ It suggests the approach of linguistic analysis as a way to understand the native's categorisation called as domain.

Contribution of Stephen Tyler

→ he was critical of earlier

anthropologist who used categories of their own culture to study other cultures.

→ He presented his ideas in book 'Cognitive Anthropology'.

→ He studied the Koya's and wrote Koya: An outline Grammar.

→ Here he suggested that Koyas have only one word called mancy for phenomenon like hail, rain, snow, etc.

→ But unlike English, which has one word for Bamboo, Koya's have 7 words for Bamboo.

Thus, Tyler showed that material reality is categorised differently by different cultures.
