

1.e) Allosomal Aberrations in Humans

Allosomal aberrations are the defects in the Chromosomal number of the sex ~~cell~~ chromosomes (X or Y)

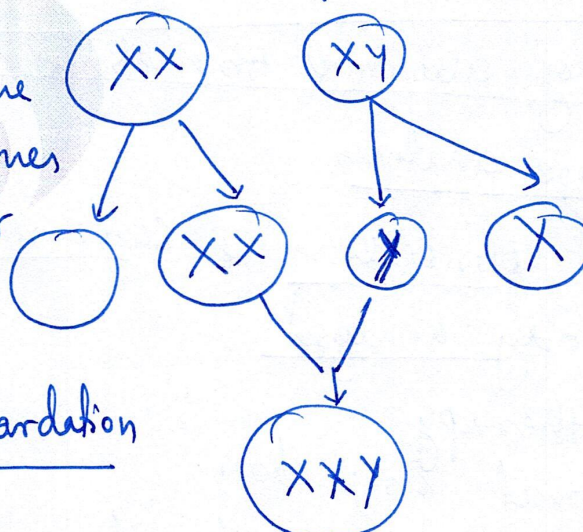

There are few allosomal aberrations in humans ~~are~~:-

(i) Klinefelters syndrome (XXY): The individual is male with female characteristics. → one Barr body

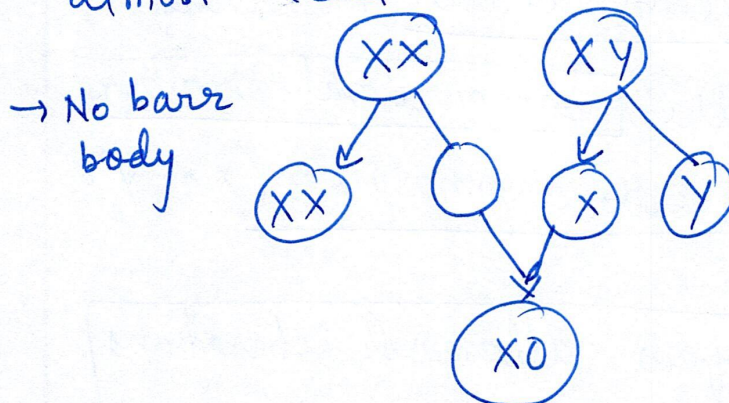

Reason → Non-dysjunction of X-chromosome during division.

Impact

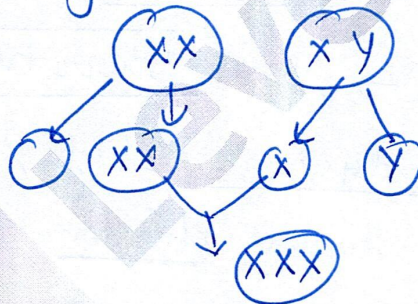

- Menstrual issue
- Sperm issues
- cleft chin or palate
- Brain & kidney retardation

(ii) Turners syndrome (XO): person is almost dead.

(iii) Superfemale (XXX) :→ she is female with two barr body; Irregular menstrual cycle; mental retardation.

Diagnosis of allosomal Aberrations

① Karyotype analysis.

② Genetic Counselling & Screening

③ Barr body analysis.

④ Speech therapy

⑤ Hormonal injection.

Thus, these allosomal aberrations are
 1471 seen as havoc.
