d) Survey Research method in Anthropology

Survey Research Method involves selecting a large random sample and then systematically collecting quantitative data to draw conclusions and test research by hypothesis.

The method involves:-

- ① Selecting a sample: Sample should be randomly selected to eliminate any bias.
- ② Data Collection: Tools like questionnaire and schedules can be used to collect data.
- ③ Data Consolidation: once collected, data is consolidated into tables, charts, softwares for further analysis.
- ④ Analysis and Presentation along with drawing conclusions.

Applications

- ① Conducting family health surveys,

► NFHS-5

- ② Understanding socio-economic profile of ~~com~~ a community region.
- ③ Understanding co-relation between various social parameters like economic status, social standing, access to education, etc.

Merits of the Method

- ① Can cover a large population at once
- ② Can be used for development planning, understanding impact of welfare schemes, etc

Challenges

- ① Only quantitative method, limited qualitative analysis like participant observation.
- ② Also time and resource consuming with methods like schedule for data collection.
