

1.b) Auto-Ethnography

Auto-Ethnography is the process of study cultures in which the field of study is the researcher itself.

Based on it we try to understand culture subject under study.

Features of Auto-Ethnography →

① It is post-modernist method of studying cultures.

② It promotes reflexivity

(eg.) "Coming of Age in Second Life" → David Masteloff → Studied digital anthropology by using himself as reference

③ It brings new perspectives in the field of anthropology.

(eg.) Lila Abu Lughad's use of bi-cultural studies to highlight her own understanding while studying Bedouin women.

(4) Ensure inter-disciplinary understanding of globalization at individual level.

(eg) Gabriella → "view from window during Manley lockdown look down in Scotland"

↳ studied how impact of covid-19 affected her and culture around her

Challenges for using auto-ethnography

① Extreme relativism is promoted

② Data is biased and as presents individual understanding

③ Non-generalization of findings over larger group.

Auto-ethnography has ensured that the field can have a more varied understanding while studying cultural processes at work.
